DHRUV

dhruvdalal725@gmail.com | 9817712840 | Bahadurgarh, Haryana, India | in/dalaldhruv20 | cifraa.in

Summary

Computer Science undergraduate & startup founder with hands-on experience in 0→1 product building, market research, product strategy, rapid prototyping, and cross-functional execution. Founder of CIFRAA, a fintech product focused on simplifying mutual fund discovery and investment decisions. Strong at taking ambiguous problems from idea to implementation, with an edge in AI-assisted development and rapid experimentation.

Skills

Founder's Office / Business: Product Strategy, Market Research, Competitor Analysis, User Research, Product Roadmapping, Feature Prioritization, Problem Solving, 0→1 Product Building, Cross-functional Execution

AI & Technology: AI-Assisted Development, Vibe Coding, Python, JavaScript, TypeScript, React, Next.js, REST APIs

Product & Data: UI/UX, Data Analysis, MongoDB, MySQL, Supabase, API Integration, Data Visualization

Tools: Git/GitHub, VS Code, AWS, Vite, Tailwind CSS

Work Experience

Founder Jan 2026 – Present
CIFRAA | Fintech Startup

- Identified a gap in mutual fund discovery and analysis and conceptualized CIFRAA, an investment intelligence platform for retail investors.
- Led the product journey from problem identification and competitor research to MVP development, feature prioritization, experimentation, and iteration.
- Defined product requirements and roadmap across personalized recommendations, portfolio tracking, fund discovery, analytics, authentication, and investor workflows.
- Researched investor requirements, competing platforms, and product experiences to identify opportunities for differentiation.
- Built and iterated rapidly using AI-assisted development and modern no/low-code workflows, turning product ideas into functional prototypes and production-ready features.
- Worked across product, technology, UI/UX, data, and business decisions, balancing user value, technical feasibility, scope, and speed.
- Designed fund-analysis and recommendation flows using Sharpe Ratio, Alpha, Beta, consistency, downside protection, momentum, fund-size stability, and value metrics.

Frontend Intern May 2026 – Aug 2026
Airtel Payments Bank | Gurugram, India

- Redesigned the Notification Panel for the Airtel Payments Bank User Dashboard, focusing on usability, information hierarchy, and customer experience.
- Translated product and design requirements into responsive UI components while balancing user needs, technical feasibility, and implementation constraints.
- Collaborated with mentors and team members to understand requirements, iterate on solutions, and incorporate feedback.
- Improved notification interactions to create a clearer and more intuitive dashboard experience.

Projects

Property Management Platform
Full-Stack Web Application

- Built a platform to streamline property listings, agent operations, authentication, and data management for real-estate workflows.
- Implemented end-to-end workflows including user profiles, CRUD operations, APIs, authentication, and database integration.
- Developed RESTful API endpoints using Flask (Python) and integrated MongoDB Atlas for scalable data persistence.

SignBridge
AI Accessibility Product

- Developed an AI-powered accessibility concept designed to translate sign-language gestures into speech, improving communication between sign-language users and others.
- Explored real-time computer-vision and speech-processing workflows to move the concept from idea to functional prototype.
- Focused on reducing interaction friction through an intuitive, real-time user experience.

VisionSense
AI Smart Glasses Concept

- Conceptualized an AI-enabled smart-glasses solution focused on helping users interpret their surrounding environment through computer vision.
- Explored object recognition, contextual understanding, and real-time assistance as core product capabilities.
- Designed the product around hands-free interaction and practical accessibility use cases.

AutoPulse AI
AI Automation Product

- Built an AI-driven product concept focused on automating repetitive workflows and reducing manual decision-making.
- Explored automation pipelines combining AI capabilities with structured inputs and user-facing workflows.
- Focused on identifying high-friction tasks where intelligent automation could create measurable user value.

Judgment Prediction NLP
Natural Language Processing

- Developed an NLP-based project exploring prediction of judicial outcomes from textual legal information.
- Applied natural-language processing and machine-learning concepts to extract patterns from legal text and generate predictive outputs.
- Focused on transforming unstructured textual information into structured features suitable for model-based analysis.

Education

Bachelor of Technology — Computer Science & Engineering **2027**
Vellore Institute of Technology, Bhopal

Class XII **2022–2023**
Delhi Public School, Bahadurgarh

Class X **2020–2021**
Delhi Public School, Bahadurgarh
